Learn how whole-of-government data analysis can be used to achieve positive social outcomes

by Julian Bajkowski

Date: 16 November 2016

The NSW Government's progress towards developing a whole-of-government data analytics centre will be on show at the 2016 Australian Government Data Summit.

We are pleased to be joined next year by Martin Hoffman, Secretary of the Department of Finance, Services and Innovation in NSW who will discuss how these new capabilities will be put in place to help government agencies achieve positive social gains.

On announcement of the new centre, the NSW Minister for Innovation and Better Regulation, Victor Dominello said:

"Jurisdictions like New Zealand, the City of New York and the State of Michigan have demonstrated that through a relatively small investment, ¬aggregated datasets can be established to assist police, emergency services, health departments and many other core service agencies to deliver smarter services for citizens.

I am not a data analyst; I am not a scientist; I am not a technician, but the reason I am so passionate about data and analytics is because I can't think of a single, more powerful way to tackle some of society's biggest problems."

Hear more from The Hon Victor Dominello and Martin Hoffman on the vision for the use of aggregated data sets to assist core service agencies at Akolade's Australian Government Data Summit being held March 2016 in Canberra.

Summit registrations are now open!
